## IN THE SPECIFICATION

Please replace the below-indicated paragraphs with the following rewritten paragraphs.

A1 [0011] This application claims priority to U.S. Provisional Patent Application No. 60/355,742, filed on February 5, 2002.

A2 [0025] Referring to Fig. 2, a preferred embodiment of the mobile station 2 will now be described. The mobile station 2 includes processing circuitry 80, a memory [[82]] 24, a communications transceiver 84 and an antenna 86. The processing circuitry 80 preferably includes a control processor 90 for controlling the operation of the mobile station 2, a signal processor 92, a searcher 94 and a system determination unit 96. The memory 82 preferably includes both volatile and nonvolatile random access memories that store a preferred roaming list, including a systems table 100 and an acquisition table 102. The memory 82 may also store one or more lookup tables 104, such as a list of the most recently used systems [[106]], and program instructions for execution by the processing circuitry 80.
